**Felix A. Marino Co., Inc. (FAMCO)** has been providing pavement maintenance and preservation services throughout the New England region for over 65 years. A pioneer in the industry, **FAMCO** has patented and developed specialized products to help our clients preserve and maintain their pavements. **FAMCO** provides conventional pavement maintenance services such as same day patching, milling and paving, and infrared thermal repairs. **FAMCO** also provides pavement preservation services such as cold crack filling, micro-macadam/paint patching, and select surface treatments (Maltene Rejuvenating & Asphalt Emulsion Seals). FAMCO is the **exclusive distributor** for **TRICOR Refining, LLC** for the New England region.

**Reclamite**® is a Maltene Replacement / Rejuvenating Emulsion which extends the life of asphalt pavement at a low cost. It is a top of the curve application.

**Reclamite**® stops deterioration at the top where it begins, and penetrates the asphalt to change what's underneath by replacing the missing maltene oils and resins. Dry and brittle pavements exhibiting signs of oxidation, raveling or cracking can be rejuvenated to reverse these characteristics with a spray application. It changes its viscosity and durability (softens it). **Reclamite**® will increase penetration values and reduce viscosity values, providing flexibility to the asphalt binder. It fluxes with and densifies the asphalt binder as it co-mingles with the asphalt. A light sand cover is typically applied for friction.

Unlike most bio-based materials that are composed of various diluents derived from agricultural sources, **Reclamite**® is a true rejuvenator. These bio-based type products will dissolve asphalt binder to soften it, but cannot replace the natural petroleum oils and resins missing from the asphalt binder. They soften the asphalt, but typically offer no improvement in durability because they can't add back the missing maltene fractions.

**Reclamite**® Preservative Seal

**CRF**® Restorative Seal is a modified Asphalt Emulsion specifically designed for pavement surfaces exhibiting more severe deterioration than would normally be treated with a **Reclamite**® seal. Pavements that have too many cracks for crackfilling and yet are candidates for conventional chip seal, slurry seal or overlay should be considered for **CRF**® treatment. **CRF**® remains flexible and resilient to create an in-depth seal. **CRF**® is applied by conventional surface spray applications, including scrub seals.

**Even this can be Saved !**

**CRF**® Restorative Seal

**CRF**® Scrub Seal / Sand Seal

**Cold Crack Filling & Paint Patching**

**CRF**® as a Cold Pour Crackfiller is an economical and safe preventative application. Undiluted **CRF**® is used as a crackfiller or spray patch emulsion. **CRF**® will not become brittle or crack, remaining resilient and effectively providing a long lasting seal even through freeze/thaw cycles. FAMCO offers pressurized cold pour crack tank trailers and skid tanks with crack dispensers to municipalities so there is no need for costly equipment for application. Just apply/pour and cover with sand/aggregate. A simple process that provides comprehensive results. **CRF**® is used to fill cracks in its concentrated form and can be modified as a Restorative Seal.

**Spray-patch/Paint-patch**
