CRF®

Restorative Seal

CRF® Benefits:

- Flexible Emulsion
- Resilient
- Resists Oxidation
- Does not Require Heat
- Long Product Storage Life

CRF® Restorative Seal is a cationic blend of asphalt and rejuvenator applied to pavements that exhibit more moderate deterioration including increased raveling, loss of aggregate and minor alligator cracking. Providing a “seal in depth,” CRF® Restorative Seal is flexible and resilient, it does not harden or dry out.

It is applied using conventional spray applications by distributor truck. Drag or scrub methods can also be utilized if needed to even out and work the emulsion into voids and cracks. CRF® provides an economical alternative to conventional wear course seals.

CRF® was developed as one of the very first hybrid seals of its kind. It is utilized with a fine aggregate filler, which penetrates the emulsion and adds binder strength. The aggregate and emulsion are “kneaded and worked” by vehicular traffic to provide a flexible seal. Unlike standard emulsions (CSS or SS emulsions), CRF® is a blend of asphalt and rejuvenator that is less susceptible to oxidation. Designed to do more than just “coat” the surface aggregate, CRF® holds the aggregate filler while the emulsion fills the surface voids with a very flexible product..

FAMCO is the authorized New England Distributor for Tricor Refining, Inc. Please contact us for more information or visit our web site to learn more about CRF® and other available products.
